Keywords: interactive didactic strategies, educational practices

Abstract. The evolution of society as a whole, the evolution of sciences as the engine of its development could not take place without the changes in approach in the education sciences. As a result, the science and art of teaching others, of teaching them to learn but above all of instilling love for knowledge followed and at the same time determined the evolution of humanity. The sciences of education in their entirety but also separately, the principles and methods by which society at a certain moment of its evolution considers and accepts to form the new generation (and not only) are the most conclusive expression of the vision of man and his future projection.
